the problem of designing managing and coordinating the efforts of different parts of complex organizations is central to the management and organizations literature a central element in turn of simon s 1962 argument which provides a foundation for understanding complex organizations is that the fundamental properties of complex systems are hierarchy and near decomposability these dual properties are argued to enhance the evolvability of such systems a critical question however is whether boundedly rational managers will be able to identify and uncover some true latent structure of hierarchy and decomposability this question is intimately related to broader issues of concern to organization theory including the usefulness and value of design efforts and the implications of organizational change processes in an effort to unite simon s ideas about complexity with mainstream organization theory we address three research questions 1 how does the architecture or structure of complexity affect the feasibility and usefulness of boundedly rational design efforts 2 do efforts to adapt in the space of organizational forms complicate or complement the effectiveness of first order change efforts 3 to what extent does the rate of environmental change nullify the usefulness of design efforts we employ a computational model of organizational adaptation to examine these questions our results in identifying the boundary conditions around successful design efforts suggest that the underlying architecture of complexity of organizations particularly the presence of hierarchy is a critical determinant of the feasibility and effectiveness of design efforts we also find that design efforts are generally complementary to efforts at local performance improvement and identify specific contingencies that determine that extent of complementarity we discuss the implications of our findings for organization theory and design and also the burgeoning literature on modularity in products and organizations

the need for customer friendly organizations exists across fields and industries corporate leaders have long known the value of customer support even public agency leaders increasingly recognize the need to offer better service to citizens this book presents the organizational architecture of customer friendly organizations how do some private companies and public agencies become customer friendly by accident or design academics and practicing managers know that organizational design affects behavior this book helps us understand how we develop high performance organizations in this case organizations that consistently deliver high quality service it builds on the theory and application of systems thinking to organization design and behavior by showing how products structure psychological climate culture and leadership work together to produce customer friendly experiences beginning with the architectural model the
